# Assist MD

Mentor: John Batikian

"Generating operative reports is the holy grail of medical tech industry"

-Bruce Kennedy (Arthrex Tech VP)

Assist MD is a computer vision platform that tracks surgical events in real time!

## Motivation

### A surgeon's story

On average, surgeons write 398 operative reports a year, each taking 10 minutes to complete. Over a 35 year career, a doctor loses 2320 hours on this paperwork!

- 50% of a surgeon's time spent doing paperwork
- 92% are upset with paperwork and 90% say it obstructs patient care

## Assistance in Surgery

Equipment needed: Dual Cameras

### Surgery Feed

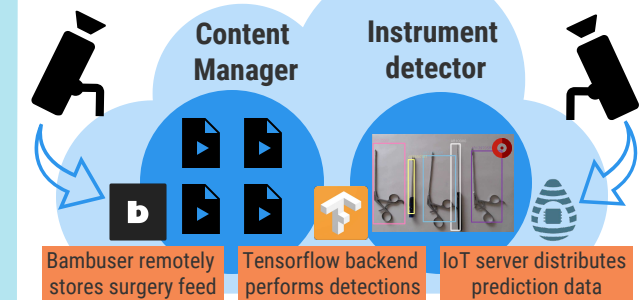

Streaming app captures medical scene

### Instrument Feed

Python server streams webcam data

Streamed content and event details are delivered to app in video/graphical format

### Live Surgery

### Event Sequence

### Live Indicators

### Instrument Usage

Dr. Humphreys is currently using 2 instruments

## Web App

Register new hospitals to Assist MD  
Observe surgery streams from anywhere  
Retrieve Operative Reports

### Home Page

Surgeons interface with React app deployed on Heroku

- Watch surgeries and see stats live
- All surgeries auto upload to profiles
- Review performance estimation

- Register hospital to start tracking surgeries
- Profiles count surgeries performed
- Observe all surgeries from any hospital

### Hospital Profile

Surgeries saved in database and displayed on Hospital Profiles

## Operative Report

No more hand-written reports  
More precise narratives

- Narrative of surgery is generated as Operative Report in a PDF
- Surgeon cuts out manual paperwork and reclaims lost time

Travis testing for production  
Mocha-Chai testing for app

## Integrating a solution

- Hospital registers with Assist MD
- Set up Assist MD cameras  
Perform surgery as usual
- Live event tracking  
Surgery streamed for observation  
Instrument stats collected
- Operative Report is generated  
Performance estimation generated
- Surgeon saves time on paperwork  
More time for patient care
