GOAL

More effective surgeries.

GOAL

Why more effective surgeries

Less time with surgical tools in your eyes

GOAL

Why more effective surgeries

Less time with surgical tools in your eyes

Less physical damage

GOAL

Why more effective surgeries

Less time with surgical tools in your eyes

Less physical damage

Better recovery

GOAL

Why more effective surgeries

More surgeries can be performed

GOAL

Why more effective surgeries

More surgeries can be performed

1% improvement

GOAL

Why more effective surgeries

More surgeries can be performed

1% improvement

38,000 more surgeries per year

GOAL

Why more effective surgeries

**Surgeons can spend more time with patients
diagnosing their problems.**

Surgeons and athletes watch replays to improve themselves.

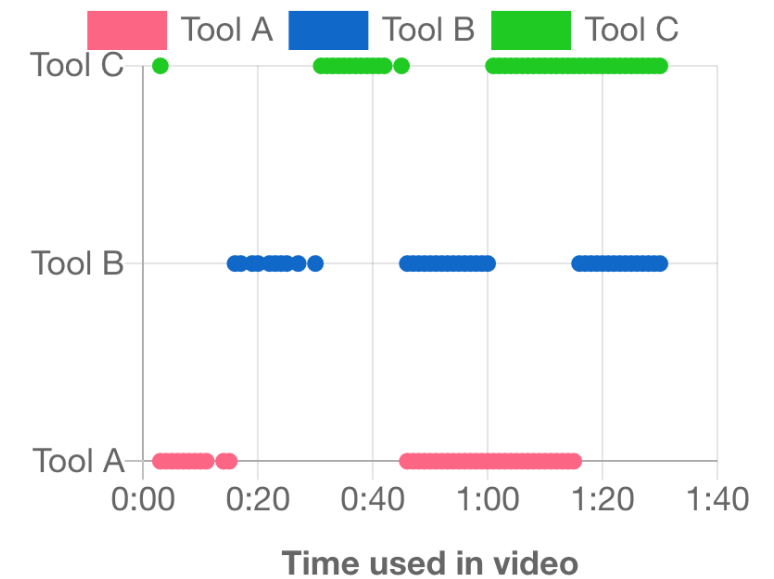

A photograph of surgeons in an operating room, wearing blue scrubs, masks, and caps, illuminated by bright surgical lights. The image is overlaid with a blue gradient.

SOLUTION

- Use machine learning to obtain useful data from surgery videos by tool detection
- Provide surgeons surgical analysis for self improvement
- Improve overall surgical performance

WHY TOOL DETECTION

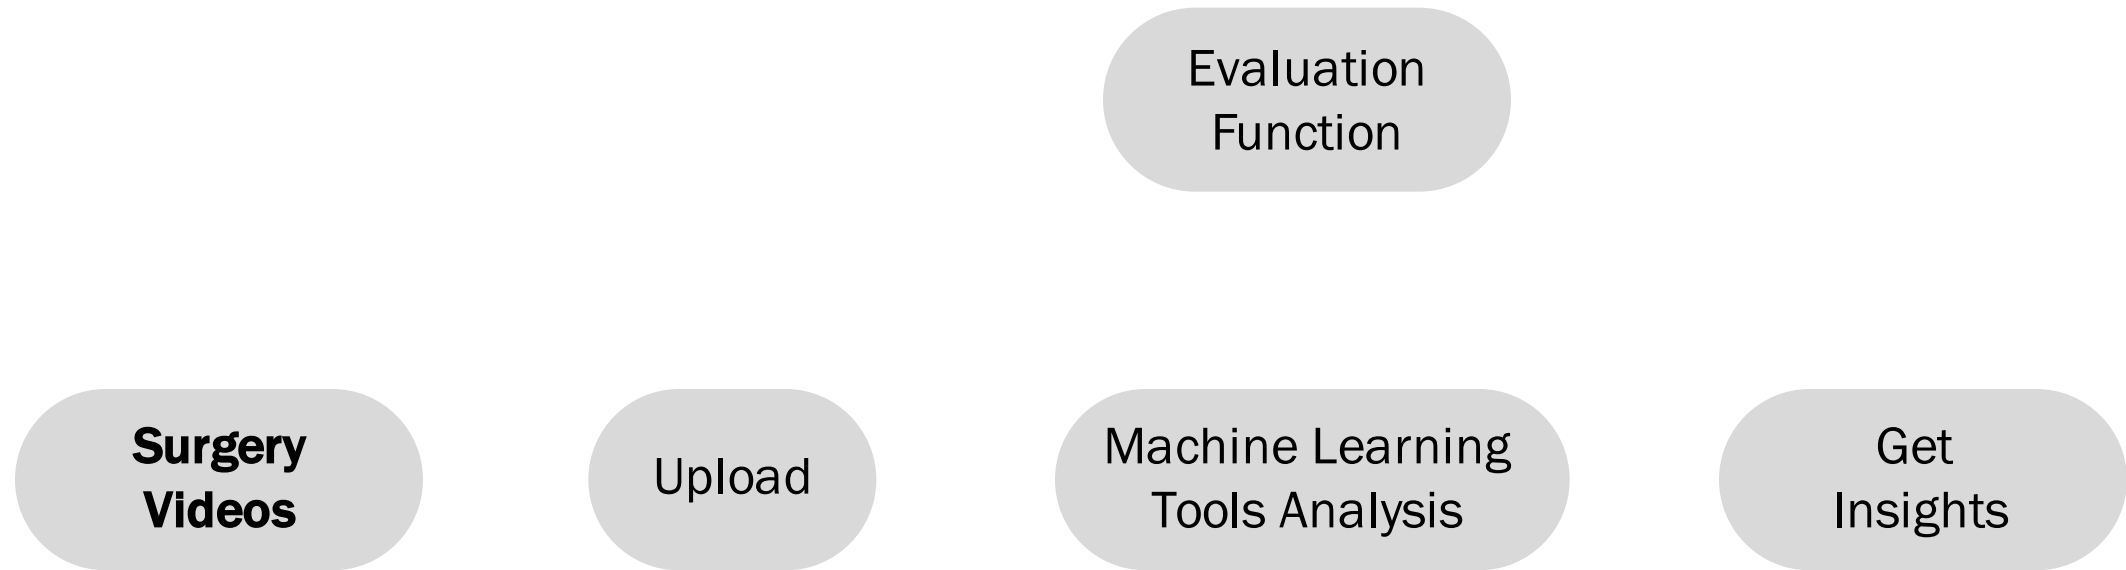

- Tools can indicate surgery procedures.
Eg. scalpel means some sort of cutting performed on patient
- Measuring the time of each tool being used will give us an overview of the surgery performed
- Therefore, we successfully extract surgical procedure out of surgery videos

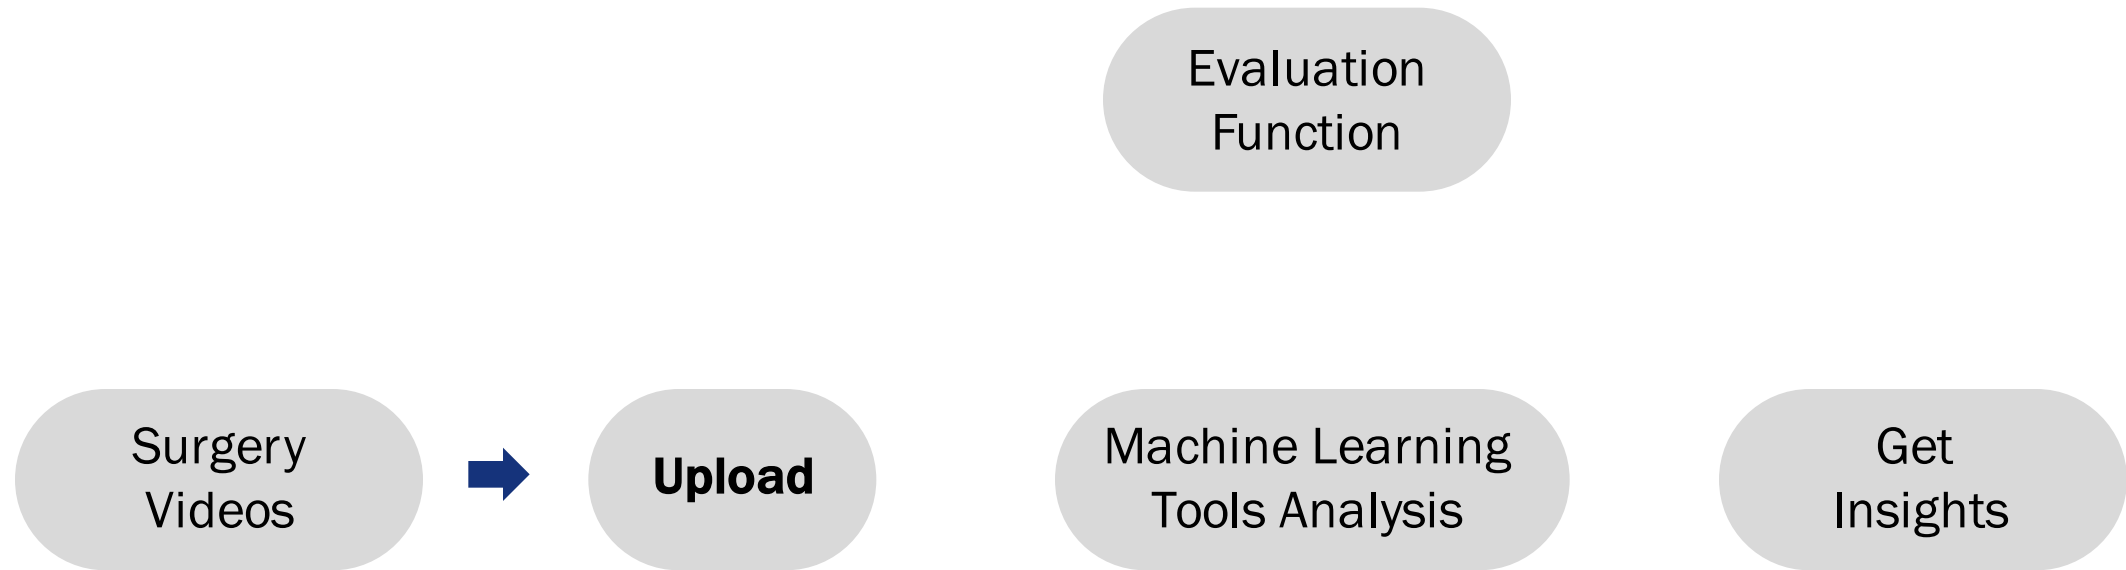

DEMO

CHALLENGE

Training Data

- Difficult to access due to patient privacy
- Almost none of them are labeled
- Eventually we have to record the data in Alcon's surgery room

CHALLENGE

Machine learning design

- Trade off between long training time and better accuracy
- Limit parameters to find the balance
 - input image size
 - hidden layers
- Final result:

6HOURS
TRAINING TIME

87%
ACCURACY

FUTURE IMPLEMENTATIONS

- **Extend to more kinds of surgeries**
- Correlate post-surgery outcomes with surgery procedure
- Get more data such as motion detection beyond tool recognition

FUTURE IMPLEMENTATIONS

- Extend to more kinds of surgeries
- **Correlate post-surgery outcomes with surgery procedure**
- Get more data such as motion detection beyond tool recognition

FUTURE IMPLEMENTATIONS

- Extend to more kinds of surgeries
- Correlate post-surgery outcomes with surgery procedure
- **Get more data such as motion detection beyond tool recognition**

CONCLUSION

- **Goal: Better and more efficient surgery**
- A webapp that understands surgical details and provide valid insights.
- Surgeons can then use the insights to self improve
- Benefit both the patients and the surgeons

CONCLUSION

- Goal: Better and more efficient surgery
- **A webapp that understands surgical details and provide valid insights.**
- Surgeons can then use the insights to self improve
- Benefit both the patients and the surgeons
