Gaps in telemedicine

Telemedicine addresses significant barriers to accessing healthcare such as commuting, wait times, and scheduling, but solutions do not extend beyond video conferencing

Types of visits that can be conducted virtually are limited to common conditions like the flu

Doctors cannot record patient vitals to inform their diagnosis Language barriers persist without translators despite the existence of online translation tools

Filling the gaps

Our goal is to augment the patient experience of virtual doctor's appointments and make virtual visits as effective as in-person visits.

Enable physical therapy use cases through Augmented Reality Utilize wearable data to help doctor diagnosis Allow patients to communicate in the language of their choice
