

GCOMPSC 266

**Formal Specification
and Verification**

Dick Kemmerer

Introduction CS266 January 6, 2009 1

Goals for the Course

- Each student familiar with basic verification techniques
- Capable of reading and evaluating verification literature
- Capable of pushing the frontiers of verification research

Introduction CS266 January 6, 2009 2

Prerequisites

CMPCSCI 130AB

Formal Logic

Introduction CS266 January 6, 2009 3

Homework
Approximately Weekly
Late homework not accepted

Final Exam
Thursday, March 22, 2007 Noon-3:00pm

**Detailed Synopsis and Review
of Formal Methods Topic
or
Research Project**

Introduction CS266 January 6, 2009 4

Grade Based On
Homework
Paper or Project
Final

Final Exam
Thursday March 19, 2009
Noon - 3:00pm

NO MAKEUP EXAMS

Introduction CS266 January 6, 2009 5

Office Hours

Tuesday 1:00 - 2:00pm
Thursday 1:00 - 2:00pm
and by appointment

Drop in anytime

Introduction CS266 January 6, 2009 6

For Thursday Read

“UNISEX: a UNIX-based Symbolic EXecutor for Pascal” by Kemmerer and Eckmann

Introduction

CS266 January 6, 2009 7

Introduction to Verification

- What is it?
- Total vs. Partial Correctness
- Consistency vs. Correctness

Introduction

CS266 January 6, 2009 8

Code Level Proofs

- Partial Correctness
- Total Correctness
- Consistency vs. Correctness

Introduction

CS266 January 6, 2009 9

Entry Assertion - Conditions expected to be true upon entry to a program

Exit Assertion - Conditions that are expected to be true when the program is exited

Introduction

CS266 January 6, 2009 10

Correctness Assertions - Bob Floyd

A procedure is said to be correct (with respect to its input and output assertions) if the truth of its input assertion upon procedure entry insures that if the procedure halts its output assertion will be true upon procedure exit.

Introduction

CS266 January 6, 2009 11

Consider the case where we have an array A and we want to specify a procedure that sorts the first $n+1$ elements of A in ascending order.

We'll use entry and exit assertions to do the specifying
