Fun with PAIR PROGRAMMING!

Hi! This worksheet is designed to be a companion to the "Fun with Pair Programming: An introduction to Pair Programming for Students" video. Follow along as we discuss what to do and what not to do in your Pair Programming lab!

Do!

1. Talk
Not a minute should go by when you're not communicating somehow.

2. Listen
Each partner should be fully involved in the project.

3. Rotate Roles
Change places to gain new perspectives and share the work.

4. Be Patient
It's a virtue! By explaining yourself, you help yourself learn.

5. Respect
Everyone has something to offer.

6. Take Breaks
When you return, you may notice something you missed before.

7. Prepare
Do any preliminary work ahead of time.

8. Clean
How would you feel if the person you were going to spend hours with smelled?

9. Have Fun
Working with someone else can be a lot more fun

Don't!

1. Be Bossy
You don't want to be the only person in class no one wants to work with!

2. Be Intimidated
You know way more than you give yourself credit for.

3. Be Quiet
Don't be afriad to speak up if you don't agree with your partner.

4. Suffer in Silence
If you have a problem with your programming situation, let your professor or TA know.
