User Stories

UC Santa Barbara

- Similar to Use Cases but not the same
 - User stories are centered on the result and the benefit of the thing you're describing, whereas use cases are more granular, and describe how your system will act. From: http://www.boost.co.nz/blog/2012/01/use-cases-or-user-stories/
- Use cases: actors scope goals steps success
 - Details of most important requirements worked out ahead of time to ensure that everyone is on the same page
 - Useful for groups of similar stories and describing overall system
 - Use cases decompose stories into actions in the system
- User stories: scope of a feature + acceptance criteria
 - Each feature is captured as a story; stories easily prioritized
 - A story is a place holder for discussion and planning poker in a sprint

Writing Good User Stories

UC Santa Barbara

- Its typically difficult to get started writing good user stories
 - Here are 4 steps to make it easier
- 1. As a [role], I can [feature] so that [reason]
- 2. Use index cards and a sharpie
- 3. Make it testable with acceptance criteria or demo plan
- 4. Connect the dots

As a [role], I can [feature] so that [reason]

UC Santa Barbara

- Role a person; feature something your project does; reason
 a solution to a problem the person has
 - This is a pattern that is commonly used for stories

As a account owner, I can check my balance online so that I can access my daily balance 24 hours a day.

Variations

- As a [role], I want [feature] because [reason]
- As a [role], I can [feature]
- As a [role], I can [feature] so that [reason]

Use index cards and a sharpie

UC Santa Barbara

- Although there is software out there to help you with this
 - Jira, Trello, Pivotal tracker
- Physically writing out stories facilitates keeping the story clear, concise, and of the appropriate size
 - Keep them short and sweet and unambiguous
 - Goal is to aid communication, not overly detailed or long-winded
 - It also enables you to doodle/draw the outline of the user interface
- If it doesn't fit, break up the story into sub-stories

Make it testable with acceptance test or demo

UC Santa Barbara

- If they are short and sweet and without detail, how do we know when they are "done"?
- Include an acceptance test (what to demo when done):

Scenario 1: Title

Given [context]

And [some more context]...

When [event]

Then [outcome]

And [another outcome]...

Example

Scenario 1: Account balance is negative Given the account's balance is below 0

And there is not a scheduled direct deposit that day

When the account owner attempts to withdraw money

Then the bank will deny it

And send the account owner a nasty letter.

- All tests should fit on back of story card (in sharpie)
 - If they don't, break up the story into two
 - You should be able to code them in a few lines of code
