WHAT IS HTML?

HTML is written in the form of HTML elements consisting of tags enclosed in angle brackets (like <html>), within the web page content. HTML tags most commonly come in pairs like <h1> and </h1>, although some tags, known as empty elements, are unpaired, for example <img>. In between these tags web designers can add text, tags, comments and other types of text-based content.

The purpose of a web browser is to read HTML documents and compose them into visible or audible web pages.
WHAT IS CSS?

CSS is an acronym for Cascading Style Sheets.

CSS is a style language that defines layout of HTML documents. For example, CSS covers fonts, colours, margins, lines, height, width, background images, advanced positions and many other things. Just wait and see!

HTML can be (mis-)used to add layout to websites. But CSS offers more options and is sophisticated. CSS is supported by all browsers today.
WHERE IS CSS?

It can be:

1. Inside the HTML Document
   - Inline
     - `<p style="font-size: 10px; color: #FFFFFF;">"</p>`
   - Inside
     - `<style type="text/css">"</style>`

2. Outside the HTML Document
   - `<link rel="stylesheet" type="text/css" href="http://www.dreamdu.com/style.css" />`

3. Nowhere
   - Use the Browser Defaults
TYPICAL CSS ELEMENTS

1. Selector (Elements, ID, Class, Properties...)
2. Properties
   1. Background
   2. Text
   3. Font
   4. List
3. Positioning
   1. Box Model
   2. Position
   3. Float
4. Advanced Features

Basic CSS Tutorial for Web Artist
WHAT CAN I DO?
Flexible Layout, Filters Effects, Natural Interactions, ...

They’re all illusions...

Creating Web Illusions
